

# Summer 2012

## **President's Message:**

Firstly, I would like to sincerely thank those Course Coordinators and their Host SAR Groups, Instructors and Regional Directors who worked hard to provide, organize and run our spring tracking courses! We still have some SAR NIF money for more courses in the fall. There is a list of courses planned for the fall later in this newsletter.

Secondly, we have the Annual General Meeting coming up, which includes elections to your Association Executives and Regional Directors. And we are always looking for members to volunteer for the committees that are so important to running the Association. As is typical of most volunteer organizations, only a handful of dedicated members carry the bulk of the workload. We now have over 250 members! I hope some of you are willing and able to step forward and help us continue to provide Tracker training in BC.

On a personal note, I will not be standing for re-election at the AGM. I believe we have successfully matured from a bare-bones Society to a robust Tracker Training Group. At times over the past two years, I have also had to perform the additional duties and fill the vacant positions of Secretary and Treasurer, writing the quarterly reports to NSS, annual reports to the BC Societies Registrar, applying for grants and funding, as well as working with the Training Committee on course development, the new training video, the Newsletter, and on our own BCTA GSAR Tracking Instructor Course. Plus, being on call outs with Comox Valley GSAR, and instructing on

JIBC Team Leader courses (and spending winters in sunny Arizona!) While I greatly appreciate the good support and help some of you have provided over the past two years, this Association can only grow better if there is more direct, committed involvement by more of its members.

If nominated, I would volunteer to continue to serve the Association as Secretary, thereby providing some continuity in the executive administration. I would also continue to work on the Training Committee to complete the course development, lesson plans, course materials and training aids.

Three of the Regional Directors have also completed two years on the Board. While some have indicated a willingness to be re-elected and continue, they would also be willing to let someone else take over promoting and facilitating Tracker Training in the various parts of the Province. This is a great opportunity for individuals to contribute beyond their local SAR Groups and become involved at the regional and even the Provincial levels.

There is also room in the Membership, Policy and Training Committees for members who would like to contribute to running the Association. We need to grow these committees, not only to perform the tasks they do to administer and run the Association, but also for continuity, so that in future the Committee Chairs and/or the Executive and Directors aren't the only back-ups familiar with the committees' work if positions become vacant.

# British Columbia Tracking Association

www.bctracking.org

With the completion of the NSS SAR NIF Contribution Agreement at the end of the year, we will have produced formal GSAR Tracker Training Standards, which we hope will be approved by EMBC as well as NSS. As I mentioned earlier, we have a great cadre of certified instructors and they now have an Instructor Manual on DVD – so they all have the same instructional and course administrative materials. We also have all our Association policies in a single manual.

With the current level of membership, we should be able to continue to finance the budget items essential to the administration of the Association. This includes critical items such as: liability Insurance, website, annual society fees, membership and certification cards, postal fees, and administrative out-of-pocket expenses.

In closing – I am asking those of you who are sincerely interested in seeing GSAR Tracker Training at reasonable cost, to be provided in BC, and can commit to working within the Association, please send me an e-mail before the AGM so that we can move forward with “fresh blood”!  
[President@bctracking.org](mailto:President@bctracking.org)

## Spring Tracking Courses!

Four Tracking courses were held this quarter at Princeton (BCTA/UTS), Salt Spring Island, Mission and Elkford. for 95 students! Congratulations to those who advanced in their individual certification!

**Princeton UTS TK1 & SC** 32 Students attended the UTS course at Camp Tulahead hosted by Princeton SAR. Sorry to hear that their SAR hall burned down during the weekend! Fortunately, much of the equipment stored in the Hall was removed and saved.

Twelve members achieved UTS Track Aware: Stephanie Read, Roger Edgar, Jack Brockhuizen, Dale McMullen, Leonard Nelson, Gary Atkinson, Fred Deschamps, Glen Gogmen, Fred Leard, Stacy Lock, Robert Selsing and Peter Vankleef.

Nine members achieved UTS Tracker 1: Merrily Corder, Mark Moroz, Wayne Wilson, Al McCormick, Rebecca Turner, Scott Hare, Julie Robbins, Ram Sudama and Robert Selsing.

And - Peter Wilson achieved UTS Sign Cutter!

### **Congratulations to all!**

**Terrace TKA.** 12 Novices – including 8 Rocky Mountain Rangers!

**Salt Spring Island.** 15 Novice, 9 Advanced. Linda McQueen achieved BCTA Track Aware.

**Mission TKA & Advanced.** 7 Novice, 7 Advanced.

**Elkford TKA & Advanced.** 13 Novices.

Unfortunately, courses at Silver Lake and Golden had to be cancelled due to too few registrations.

Courses are in the initial planning stages for the fall. Check the BCTA website calendar often for updates. As well, members will be sent first notification by e-mail.

# *British Columbia Tracking Association*

[www.bctracking.org](http://www.bctracking.org)

## **Board of Directors Meeting**

Highlights from a teleconference on 16 July.

## **Finances**

The Association finances are in good shape and we have sufficient funds to continue with the training program into the fall. A budget for the balance of this year's courses will be available by 1 August.

## **Tracker Training Funding for 2013**

Despite running a successful GSAR Tracker Training programme for almost two years, the Association has been denied BC Gaming grants. A main reason for denial is that Gaming Grants for SAR Training are already awarded to other SAR Groups and Associations. So, we have submitted a letter to the BC Search and Rescue Association (BC SARA) outlining a proposal to conduct Tracker Training in 2013. More to follow, once we receive a reply.

As the SAR New Initiatives Funding Contribution Agreement will expire either when the funds are used up this fall, or by 30 March 2013, the Board is looking at recommendations from the Policy Committee on a plan to offer fee for service courses next year. Obviously, cost will have to go up without the SAR NIF CA, and/or reimbursements will have to go down.

The goal is to keep the tuition and costs to GSAR Volunteers and members as reasonable as possible, while still covering the out of pocket expenses of the volunteer instructors and course hosts. Look for details in the fall newsletter, following the AGM.

## **One-Day Introduction to Tracking**

Now that we have 23 Certified Instructors, the BCTA Training Committee is looking at offering a 1-day Introduction to Tracking course which would consist mainly of classroom portions of the Novice/Track Aware course, and field demonstrations.

This course is intended as follow-on to the Basic GSAR Introduction to Tracking, without having to commit to a full weekend

of Track Aware training, for novices to find out whether they want to pursue GSAR Tracker specialty training.

Under development are two-hour modules, which could be done during four regular evening training sessions, or during one 9-hour day.

Watch the web site [www.bctracking.org](http://www.bctracking.org) for more on this project!

## **Tracker Rewards!**

The Board approved a \$500 tracker training reimbursement certificate to be awarded to a BCTA member in good standing, for submitting a 400-word (1 page) essay about what they personally have found most rewarding, challenging, interesting or revealing about their Tracker Training. The first prize reimbursement can be used to subsidize attendance at any tracking course of the winner's choosing – it doesn't have to be a BCTA sponsored course. Second prize will be a reimbursement certificate for one complementary tuition to attend any BCTA sponsored course. Third prize is a reimbursement certificate for a complementary three year BCTA membership.

All essays must be e-mailed in PDF format to [training@bctracking.org](mailto:training@bctracking.org) and [president@bctracking.org](mailto:president@bctracking.org) by 1 January 2013. The three winning members will be announced in April, at the beginning of the new Tracking Training Season! Winners will be announced and their essays will be published in this newsletter.

## **Under Age Members/Students?**

The Board debated a request from a member to lower the membership and student registration age from 19, as specified in the constitution. With due consideration of the legal and liability issues, the Board decided not to change the age requirement.

## **Membership Cards**

The BCTA membership cards will soon be issued on the spot by the Lead Instructors to students registering on a course and

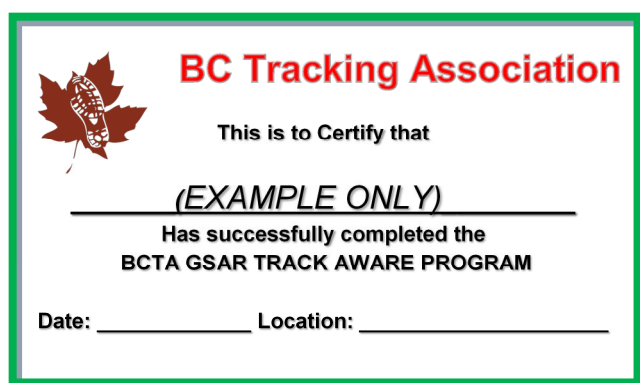

# British Columbia Tracking Association

www.bctracking.org

submitting their membership application form and payment, rather than having to wait while the application is mailed in and processed. This should speed things up and save us some mailing costs!

Memberships are only valid from 1 May to 30 April and are not pro-rated. Those that purchase a membership in the fall will have to renew by 1 May the following year.

## NEW TKA Certificates/ Badges:

Beginning this spring, GSAR Track Aware certificates with the front being a Track Aware badge in a laminated pouch with a clip were being presented by the Lead Instructors to those who certify upon completion of a course. Similar BCTA GSAR Tracking Instructor badges have also been presented to the BCTA certified instructors.

At the present time, the BCTA does not present TK1, TK2 and SC certificates, as

they are only issued by Universal Tracking Services, as per the 2009 UTS/BCTA Agreement. If you have been notified that you achieved an Advanced certification but have not received anything, please contact UTS directly. Also, please confirm with the membership committee to have your upgrade noted on the membership list. [membership@bctracking.org](mailto:membership@bctracking.org)

For those that have achieved TKA at past courses, you may request a new BCTA GSAR TKA certificate and badge by presenting your past certificate to the Lead instructor when you register for your next BCTA sponsored TKA or Advanced course. This is required in order to validate your re-certification at the completion of the course.

If you are no longer in possession of your past certificate, you will have to contact the original issuer for a replacement, or successfully complete a recertification course at that level.

**The new GSAR TKA certificates will not be issued solely because you held a previous one. Nor is GSAR TKA certification based on the number of training hours attended – rather it is based on GSAR Certification and demonstrated tracking performance on a course in accordance with the BCTA standards.**

## Projectors

The Board approved the spending of up to \$2000 for the purchase of two sets of projectors, speakers and protective cases for classroom training. While many host SAR groups do provide some audio visual equipment, having our own equipment should reduce the problems frequently encountered with setting up incompatible equipment.

# *British Columbia Tracking Association*

[www.bctracking.org](http://www.bctracking.org)

## **Course Announcements**

Courses are in the planning stages for the following dates and locations. These dates and locations are tentative, so keep an eye on your e-mail and the BCTA websites for confirmed announcements and registration forms:

- 7-9 Sep Prince George
- 14-16 Sep Comox/Mt Washington
- 21-23 Sep Vernon/Silver Star  
(Course and AGM)
- 28-30 Sep Squamish
- 28-30 Sep Cranbrook/Bull River Guest Ranch

## **Annual General Meeting**

The Association Annual General Meeting will be held Saturday, 22 September 19:00 hrs, at the Vernon course. Members will receive an e-mail a month before the meeting, detailing place and time, and agenda items. Also – watch the website calendar and Members Only section for details. For those unable to attend in person, we will try to set up a conference call.

**Elections** will be held for Executive and Director positions as follows:

**President** (Win Koch, completed 2-year term)

**Secretary** (Vacant)

**Treasurer** (A/Treasurer Alison Rose has been nominated by the Board)

**Director VI** (Peter Wilson completed 2-year term, Kathryn Farr has been nominated by the Board)

**Director SW** (Vacant)

**Director SE** (Jerome Liboiron completed 2-year term)

**Director NE** (Dwaine Brooke has completed 2-year term)

**Director NW** (Dwaine Brooke has completed 2-year term)

It is essential that nominations (including self-nominations) be received by 1 September for each of these positions, so that we may continue to carry on with organizing GSAR Tracker training in BC. For further information or to nominate

yourself or a suitable volunteer, please contact [President@bctracking.org](mailto:President@bctracking.org)

All nominees/volunteers must be BCTA members in good standing and agree to stand for election at the 2012 Annual General Meeting. The terms will be for a period of two years. Details of each of the positions are as follows:

## **President**

The President is the Chief Executive Officer of the Society and shall supervise the other members of the Executive and Regional Directors in the execution of their duties. The President will normally call and preside at all Annual, Board and Extra-Ordinary meetings of the BCTA Society.

## **Secretary**

The BC Tracking Association Society requires a volunteer to fill the position of Secretary within the Association Executive. The duties include conducting the correspondence of the BCTA, issuing notices of meetings, keeping minutes of meetings, have custody of all records and documents, except those of the Treasurer, and keep a register of members of the BCTA.

## **Treasurer**

The BC Tracking Association Society requires a volunteer to fill the Executive position of Treasurer within the Association Executive. The duties include keeping the financial records necessary to comply with the Societies Act, to render financial statements when required and to complete reimbursement claims. Currently, Alison Rose has been nominated to the position of Acting Treasurer, pending the Annual General Meeting.

## **Regional Directors**

The BC Tracking Association Society requires volunteers to fill the positions of Regional Directors throughout the Province of BC. The duties include: liaising with GSAR training officers and trackers within the region, providing tracking training materials and advice, facilitating tracking training, assisting other Regional Directors and providing reports, as required. Directors are voting members of the Executive Board

of Directors and play a major role in furthering Tracker Training in BC.

## Insurance

Please note that the BCTA carries a non-profit association Directors and Officers liability insurance and general insurance policy. The Association has been assigned an EMBC SAR Training Task number for GSAR Volunteer students and instructors, which provides WorkSafe BC and liability coverage while attending a sponsored course.

## Tracker Tales

### The Art Of Pursuit -- A Broken Twig, A Twisted Tuft Of Grass Are All That Master Tracker Joel Hardin Needs

By Susan Gilmore 1996 Seattle Times

LIVES CAN BE READ IN THE footprints left behind. The circling shuffle of nervousness. The deliberate, steady steps of someone lost in thought. Anger mirrored in the depth of a footfall. Fatigue, fear, frenzy. Footprints tell the story.

For the professional trackers, these are maps they follow with a skill as old as time: the power of observation.

JOEL HARDIN CROUCHED BY THE side of the trail and drew a line with his finger. In the September sun, weathered pine needles showed a slight indentation invisible to most eyes. Inches away, a crease was pressed into the ground, equally inconspicuous.

In the dry country above Kamloops, B.C., a place of scattered pines, rolling hills and sagebrush, tracking is easy. It is a place,

Hardin said with the confidence of three decades of practice, where sign shows well. "This one's from a jogger who ran here yesterday. A Nike," he said, tracing a faint outline in the soft ground. "This one's from the criminal."

Positioning himself above the print, he lectured softly. "See these pieces of grass? They're chewed. You can see the geometric pattern that mirrors the impact of the shoe." The escaping criminal wore a waffled, Vibram sole, no question. It was as clear as if Hardin were looking at boots on the rack at REI.

A night watchman had been abducted by three men who stole a cash box, then abandoned their getaway van and headed west into the brush on foot. There were no witnesses, and a group of trackers, led by Hardin, knew only that the watchman was wearing hiking boots.

By nightfall the trackers would find the watchman's body, shot and stabbed. The criminals had long fled the scene.

Hardin, on the trail of one, quickly dismissed the jogger's tread and pointed to dry grass around the Vibram imprint. "I can tell it's fresh," he said. "It was made since noon."

He pulled out his tracking stick, a 3-foot-long metal rod marked in inches, one of few essential tools of a tracker, and placed it along the boot print.

He sketched the image of the print on a small blue card - a tedious task that forced him to memorize the clue in a way a photograph would not.

Measuring the distance to the next print - another faint crease in the landscape - he calculated the criminal's stride. Up the trail, over a hill, down a ravine he followed the track, much like someone on a daunting scavenger hunt.

Broken twigs, displaced branches, flattened grass all told him the trackers were on the right trail. Reading the sign as if it were Braille, with daylight fading, he bent on one knee and ran his hand over the ground.

An imprint in the dirt showed a pine needle moved a fraction of an inch. This sliver of a clue, dried and curled by the sun, was a false lead, he explained, pointing to another pine needle that clearly had been stomped on by the fugitive.

**"Do not lose the prime sign."** It is his mantra.

# *British Columbia Tracking Association*

[www.bctracking.org](http://www.bctracking.org)

HARDIN, MASTER TRACKER from Whatcom County, with a strong jaw and grizzled face that give him a striking resemblance to Charles Bronson, measures his words much the way he measures his sign: with confidence and precision. He is taciturn, but not modest. He knows he is very good.

In 25 years with the federal Border Patrol, he saw it all. He has found murderers and missing children, desperate people trying to sneak into the United States and criminals trying to sneak out.

"Joel's a bulldog, he has bulldog tenacity," says Ab Taylor, Hardin's Border Patrol mentor and one of the nation's foremost trackers. "He's a hunting dog."

He uses no infrared photography, DNA analysis, sophisticated fingerprint comparisons.

Hardin simply relies on his senses, his instinct and the knowledge that few criminals are smart enough to hide the footprints they leave behind.

A criminal careful to wear gloves or wipe away a fingerprint may have no idea his footprints can be just as revealing to a trained tracker.

"With today's mobile movement of people and the overwhelming increase in abductions and homicides that involve depositing bodies, trackers are a great gift," says Hardin. "They can identify footprints that help patch cases together."

In the past 30 years Hardin figures he's tracked more than 5,000 people, from a man wanted for beating and stabbing a 77-year-old woman near the Canadian border, to a Boy Scout lost during a California jamboree. Even Bigfoot seekers have called for his help.

To be sure, Hardin's job is made much easier by careless criminals.

"Most crooks don't know what they leave behind," said Stan Robson, sheriff of Oregon's Benton County and one of Hardin's trainers.

To Hardin's eye, a sign is anything indicating a person or thing has passed along the way. These are clues invisible to all but the best of trackers.

And often what a tracker doesn't see is as important as what he does.

When 7-year-old Roxanne Doll was kidnapped and murdered last year in Everett, Hardin joined Snohomish County

search-and-rescue volunteers looking for her. They had thought they might find the tiny, blond child, or her body, in woods off the Mountain Loop Highway where her father and another man, later accused of killing her, had been camping. But when searchers found no footprints of the child or of someone who might have carried her into the woods, Hardin said with certainty she wasn't there. Her body eventually was found in North Everett a week after she disappeared.

"A lack of footprints is a fact of evidence," Hardin says. "That's what sets trackers apart. Not finding something is as valuable as finding something."

HARDIN GREW UP IN A small Idaho town where he loved to fish and hunt and explore the outdoors. He became a policeman in 1960. Five years later he joined the Border Patrol and was assigned to the Southern California border.

"Coming from the Northwest I've always hunted and fished and been out of doors. I thought I knew as much about tracking as any other hunter," he said.

But in the government's fledgling tracking program, Hardin found out he didn't.

"There was a very small, elite group of sign-cutters, of which Ab (Taylor) was one," said Hardin. "Periodically they would take new people into the group."

The Border Patrol's emphasis on tracking coincided in the mid-1960s with the end of the Bracero program, an agreement between the U.S. and Mexico that allowed Mexican farm workers into this country to offset World War II labor shortages. The program brought in 100,000 or more workers each year before the door to the border was latched.

"In 1965 we tried to grab everyone and account for everyone who crossed the border," said Hardin. "If I had one who got away, I'd better have an excuse. We counted every track that crossed the border illegally."

The week he joined the Border Patrol in 1965, said Hardin, there were 35 agents assigned to the Southern California station and they caught two people trying to sneak into the country. Today, he said, at the same crossing, the number might be 5,000 people a day. One result, he said, is that tracking skills are dying out.

# *British Columbia Tracking Association*

[www.bctracking.org](http://www.bctracking.org)

"When you have hordes of 200 people walking across the border en masse, with only two or three agents to stop them, you don't get the privilege of tracking. It's a numbers game; tracking is a quality game." Tracking, or "sign-cutting" as it is officially called in the Border Patrol, is also, by any standard, a slow, tedious process.

"To cut means finding the evidence of the passage of a person," said Hardin. "You look for marks, scuffs, scrapes that a person is in the area."

In 1972, after seven years on the California border, Hardin moved back to the Northwest to patrol the U.S.-Canadian border. He settled with his wife, Janet, an artist, and their four daughters in the tiny farming community of Everson, a Whatcom County border town of 1,800 along the Nooksack River.

He worked for the government's anti-smuggling unit until he retired in 1990.

Now, he spends much of his time teaching his skills through his company, and working on a book about his pursuits.

He has trained trackers throughout the Northwest, including the Pacific Northwest Trackers used by King County Police. Hardin also trains the U.S. military and last summer taught tracking to Army snipers.

From time to time, although not as often as he'd like, he is called in on searches and criminal investigations.

The tracking job this fall in Kamloops ended with the capture of three murderers.

But in reality, there was no murder. It was an exercise, part of a three-day training session Hardin conducted for search-and-rescue volunteers from British Columbia.

THE BORDER PATROL'S TRADITION OF TRACKING traces to the Old West. Many early Border Patrol trackers were remnants of even earlier Texas Rangers, who learned the skill from Indian scouts.

Some, called River Riders, were still patrolling the Rio Grande border when Ab Taylor began his long career with the Border Patrol. "I just catered to those old dudes and got them interested in teaching me," Taylor said. "The best trackers did almost magic things."

Like Taylor before him, Hardin also marveled at the ability of trackers to unravel lives through scuff marks and twisted pieces of grass.

He learned that tall people leave longer strides and someone who's angry leaves a deeper footprint, stomping as he walks. Fearful people will run through things, leaving frenzied footprints. Someone who's lost will ramble and shuffle, often twisting in circles.

A person's mental state is mirrored by his feet. A good tracker, Hardin said, can find the evidence to map the exact point a person got lost.

"It bordered on clairvoyance or a miracle gift," Hardin said.

He was tapped for the elite tracking unit because of another skill he'd mastered - typing. But he learned to track.

The long, dusty border with Mexico tested even the best. Hardin would spend 12-hour days tracking those who illegally crossed the border, and he still marvels at their skill trying to elude the Border Patrol.

They would brush out their tracks, walk on stilts. One man even tied cows hooves to the insteps of his shoes trying to disguise his footsteps. He was eventually caught 70 miles into Arizona.

"You ever see a two-legged cow?" asked Taylor.

The reputation of the Border Patrol trackers gradually grew beyond the California border stations.

In the mid-1960s Border Patrol trackers were working in remote areas of San Diego County when children became lost. Offering their assistance in a handful of searches, they picked up the signs and helped find the children.

Taylor, realizing their expertise could be put to wider use, offered the Border Patrol trackers to local law-enforcement and search-and-rescue organizations.

Hardin remembers a case in the early 1970s. Searchers had been looking for a 4-year-old boy for four days when Hardin was called to the Southern California campground from which the child had disappeared. Only two things were known - the last place the child was seen and the fact he was barefoot - and the situation seemed hopeless. Hundreds of searchers scouring acres of terrain had found nothing.

Hardin met a teenager on the search who had taken one of his tracking classes and had flagged a suspicious sign: something that looked like a skid mark on a steep bank above a pond. Overlooked by the other

# *British Columbia Tracking Association*

[www.bctracking.org](http://www.bctracking.org)

searchers, the sign was as clear to Hardin as if the child had left a map.

Hardin followed tracks down a creek to a gully where he quickly found the tired and hungry boy.

"There's an overwhelming feeling of gratification to be able to find that missing child and return him to the family," said Hardin. "It's just an overwhelming emotion when you are able to crawl the last 10 feet through the brush or last 10 feet around a stump and find the small child."

MORE OFTEN, THE PEOPLE Hardin tracks don't want to be found.

When state investigator Bob Keppel reopened a suspicious Yakima death case in 1981 he needed to find a footprint expert. Associates told him the best guy was right under his nose - Hardin.

A woman had been found dead in a horse shed and medical experts concluded at the time that she had been kicked by a horse. But the victim's sister refused to believe it was an accident and convinced investigators to reopen the case.

Using grainy, black-and-white photographs and researching weather reports for the day she died, Hardin listed 11 reasons why the victim could not have walked out to the stable.

There was a fine white powder on the bottom of her boots that most certainly would have disappeared had she walked in the snow. Studying hoofprints, Hardin deduced that the animals were not shod - another blow to the kicking theory.

A dozen years after her death, the husband was convicted of cracking his wife's skull with a hammer. Hardin's analysis proved critical in winning a conviction, Keppel said.

Keppel also called Hardin in on several of the unsolved Green River murder scenes. Hardin found footprints, but since many of the women had been dumped months or years earlier - and the crime scenes had been damaged by weather and armies of other prints - it wasn't possible to track the killer.

Hardin's most famous case is the capture of Artie Ray Baker, a California fugitive who killed a customs officer at the Canadian border in 1979. Baker, who had been a member of a militant, radical commune in California and was skilled in guerrilla warfare, shot the agent and escaped on foot

into woods near Lynden. He passed within a few hundred yards of Hardin's home.

It was clear to Hardin that Baker knew how to hide his trail, walking barefoot and across logs, brushing out his tracks and trying to trick his pursuers into thinking he had swum across a river.

All night Hardin followed Baker's sign. He found places where the killer had sat and watched the searchers. He found, beneath leaves, a shallow grave where Baker had entombed his socks.

It was a huge case. Police from throughout the region mobilized to scour the rough Whatcom County terrain.

But as daylight broke the following day it was Hardin who spotted Baker hiding in the brush. Hardin simply walked up to him, taking "three or four giant mother-may-I steps," and made the arrest. "He was mystified I'd been able to do it," said Hardin, who did not hesitate even though Baker had a gun. Hardin has never been shot at while tracking.

It may be that the only beings to escape Joel Hardin are supernatural ones.

One day in 1982 when he was vacationing in Idaho, Hardin got a call from the U.S. Forest Service. An employee had found what looked like Bigfoot tracks in the Walla Walla watershed. Would he investigate? "I said I'd never seen one, but I'd be willing to look," said Hardin, who hopped on a chartered airplane.

He found about a half-dozen footprints and, after carefully examining them, determined it was a clever hoax. He remains a Bigfoot skeptic. "As much wandering around as I've done I've yet to see evidence that convinces me Bigfoot exists," said Hardin.

Still, Hardin is under contract with the Oregon-based Bigfoot Research Project, which hopes to prove that Bigfoot is no phantom. The project has summoned Hardin to three sightings, most recently to a footprint found last spring near The Dalles, Ore.

Hardin dismissed the print after he saw the faint outline of a heel around the end of the Bigfoot impression. That, and the fact the footprints simply ended, left little question in Hardin's mind. "It has to start somewhere and end somewhere," he said. "We've never found a hoaxer who wanted to stay out in the woods the rest of his life."

# British Columbia Tracking Association

www.bctracking.org

Does it bother the Bigfoot project to trust the footprints to an avowed skeptic?

"It's perfect," said Tod Deery, project field director. "Our research project is based in the scientific method and we want to remove all biases."

As confident as he is in his skills, Hardin is haunted by the cases that remain unsolved.

"Mandy Stavik is one of the cases that bothers me the most," he said. The college student was murdered in 1989 after she vanished while jogging near her rural Whatcom County home. Her body was found in a river.

Hardin followed her track through a hay field and then it simply disappeared. Scouring the river bank, he found no evidence she'd been pushed into the river. He speculated that her body was dropped off a bridge upstream. It's a case, he said, that probably will never be solved.

HARDIN REACHED DOWN AND grabbed a twig, snapping it in half. He twirled a blade of grass between his fingers. He was keeping himself occupied, making sure he let his Canadian students do the work in their abduction exercise.

The Canadian searchers were closing in on the night-watchman killers. Hardin flicked a stick into the brush, silently signaling that they were on the right track.

The classes are tough and Hardin is a perfectionist.

"Tracking isn't for everyone," he said. "It takes diligence, attention to detail and perseverance."

That focus has been Hardin's life. Accomplished as he is, he is a man of khaki, not cashmere, clearly more at home in the woods than on the streets of a city. "I wouldn't send him to the opera or enter him in politics," says Taylor. "He has some rough, raw edges. Thanks to his wife and civilization, he's more acceptable, not quite as raspy."

To his students, though, he is a mystic and magician.

"It took me a long time to be convinced he was really seeing something," said Matt Condon, one of Hardin's students and a Snohomish County search-and-rescue volunteer. "It's like a 3-D puzzle. You stare at it and then it comes clear. Of course, you say. Of course."

Sally Sterner, a nurse from Everett and another Snohomish County search-and-rescue volunteer, remembers the first class she took from Hardin.

"We all went out onto a hillside and glanced up to look for the first track. It was just a jumble of sticks and brush. One of the instructors directed me to look at a spot and I saw the track. Man, I'll never forget my excitement. I used my stick, looked for the next one, and there it was. It was amazing it showed up in the jumble and rubble of everything. I could see them."

That sense of revelation is what Hardin hears often from his students, and it makes him proud. Perhaps tracking won't, after all, become a lost, neglected art. Perhaps lives will be saved by the skills that he shares. He has no doubt they are worth sharing and preserving.

"Most often what you do with your feet is the result of decisions that have already taken place in your mind," he says. "Until people quit walking around on two feet, our expertise will always be needed."
